

A glowing blue magnetar, a type of neutron star with an extremely powerful magnetic field, is depicted in space. The magnetar is surrounded by intricate, glowing blue magnetic field lines that form complex loops and spirals. The background is a dark, starry space.

**If a magnetar flew
past Earth within
100,000 miles, its
ultra-magnetic field
would destroy the
data on every
credit card.**

Illustration

But it most likely won't destroy your debt.
