## **CRAB NEBULA**

Astronomers have produced a highly-detailed image of the Crab Nebula by combining data from telescopes spanning nearly the entire breadth of the electromagnetic spectrum. This image contains data from five different telescopes: VLA radio (red); Spitzer infrared (yellow); Hubble visible (green); XMM-Newton ultraviolet (blue); and Chandra X-ray (purple). Chandra has observed the Crab Nebula repeatedly since the telescope was launched into space in 1999. Scale: The image is 5 arcminutes (about 10 light years) across.
